

Phase III Buffalo Public Schools Reconstruction Program

Buffalo, New York

Owner Buffalo Public Schools

Completion Date 2006

Our Fee \$57,000

Services

- Master Planning
- Architecture
- Mechanical Engineering
- Electrical Engineering
- Plumbing Engineering
- Civil Engineering
- Structural Engineering

Watts was part of a team of architects and engineers responsible for updating the Buffalo Public Schools Strategic Plan for the reconstructing of approximately 34 schools in the district. Already in the midst of construction of the Second Phase of Schools in the District-Wide Initiative to reconstruct approximately 56 schools in total, the next round of schools to be a part of Phase III Construction are to be selected. Watts performed feasibility studies for 6 of the 34 schools in

an effort to determine their inclusion in Phase III. The schools included were 11, 18, 32, 43, 78, and 187. Each feasibility study includes a detailed analysis of the existing conditions, building systems, and configuration of each school, a conceptual design to incorporate a new program at each school, a preliminary cost estimate of each conceptual design, and a preliminary Cost Allowance to be granted by the New York State education Department.

Excellence in all we do.

WATTS Architecture & Engineering, P.C.
